

WILDFIRE EVACUATION PLAN

If a wildfire is approaching your area and evacuation orders are anticipated, follow these 10 important steps to prepare your home.

Shut all windows and doors, including openings to your attic and vents, to prevent embers from entering your house.

Turn off the gas. This will help prevent feeding a fire and reduces risk to your home.

Turn off and move any grill propane tanks at least 30 feet away from your home.

Shut off your air conditioning to prevent any outside smoke from entering your home.

Turn off outdoor sprinkler system to help maintain critical water pressure in the area.

Leave exterior lights on so your home is visible to firefighters.

Remove any combustible items from the exterior of your home such as patio or deck furniture and bring them inside.

Place a ladder against your home so firefighters can have quick access to the roof if needed.

Clean up any leaves and other flammable debris from roof and gutters.

Keep checking the local news or social media for updates on evacuation orders and road closures. If you're being told to evacuate, don't wait – leave as quickly as possible!
